SCHEDULE 80 PIPE SYSTEMS

CORROSION RESISTANT PRESSURE PIPE RESISTANT TO MOST ACIDS, BASES, SALTS, ALIPHATIC SOLUTIONS AND OXIDANTS

Schedule 80 uPVC (un-plasticised Poly Vinyl Chloride) is a light and flexible thermoplastic with excellent corrosion resistance. These properties and high engineering design values make it an ideal material for many and varied application. Schedule 80 uPVC can realise substantial installation and ongoing savings to installations across all industries.

Schedule 80 uPVC will not rust or corrode and is not subject to electrolysis. The correct installation of Schedule 80 uPVC will ensure years of trouble free operation. PVC can be buried and will not be affected by soil conditions or galvanic corrosion.

TEMPERATURE

Schedule 80 uPVC can be used at temperatures up to 60°C (see temperature de-rating chart).

CHEMICAL RESISTANCE

Schedule 80 uPVC is highly resistant to acids, alkalis and many corrosive materials. It is ideal for chemical process piping and general service installation. Please contact your local Viadux representative for more information.

MAINTENANCE FREE SERVICE

Painting is not required for indoor installation. When exposed to significant sunlight we recommend the system be painted. Two coats of white, water based, outdoor paint will provide suitable protection.

APPLICATIONS

Schedule 80 uPVC pipe systems have been in service for over 50 years they have provided a versatile and dependable replacement to metallic pipe systems throughout industry and building services. Today uPVC pipe systems are the preferred option for many everyday applications. Backed by industry standards and third party certification, uPVC pipe systems deliver outstanding solutions.

PRESSURE RATING OF PIPE AT SERVICE TEMPERATURES – BAR

SIZE (IN)	23°C	32°C	38°C	43°C	48°C	54°C	60°C
15 (1/2")	55 Bar	43 Bar	36 Bar	29 Bar	23 Bar	17 Bar	12 Bar
20 (3/4")	47	35	29	23	18	14	10
25 (1")	43	32	26	21	17	13	9
32 (1 1/4")	35	26	22	17	14	10	7
40 (1 1/2")	32	24	20	16	12	9	7
50 (2")	27	20	17	13	11	8	6
65 (2 1/2")	29	21	18	14	11	8	6
80 (3")	25	19	16	12	10	7	5
100 (4")	22	16	13	11	8	6	4
125 (5")	20	-	-	-	-	-	-
150 (6")	19	14	11	9	7	5	4
200 (8")	17	12	10	8	6	5	3
250(10")	17.2	-	-	-	-	-	-
300(12")	15.9	-	-	-	-	-	-

1. Pressure ratings at 23°C are rounded from calculated values.
2. Pressure ratings are for uPVC 12454-B pipe and are calculated from experimental long term strength of uPVC extrusion compounds. Moulding compound properties may differ from pipe compounds. Therefore systems combining pipe and moulded fittings may have lower pressure ratings than those shown in the above table. This is particularly likely at elevated temperatures above 40°C.
3. When valves, flanges and other components are added to the system the system must be re-rated to take these components ratings into account.

SCHEDULE 80 PIPE SYSTEMS

DESIGN

PIPE EXPANSION – ABOVE GROUND

Pipe expansion of a cold solvent cement welded pipeline may be accommodated using any one or combination of the following techniques:

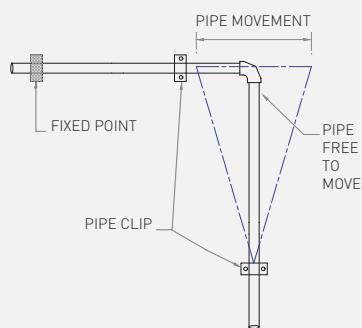

- Pipe route planning
- Expansion loops
- Expansion joints (rubber bellows)
- Pipe wall stressing

PIPE ROUTE PLANNING

In the vast majority of cases, effective route planning can eliminate the requirement of expansion loops, or expansion bellows etc with consequent financial savings.

The basic principle of design is to allow pipe runs to move axially from a fixed point (anchor) and then guide this movement into a change of pipe direction ensuring that the pipe is free to flex as shown in figure 1.

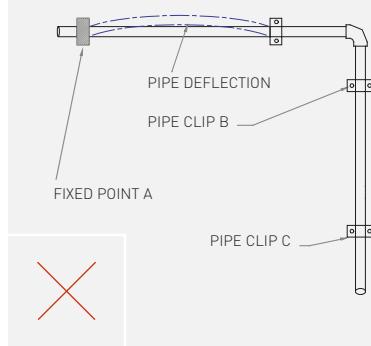

FIGURE 1

An inappropriate installation is shown in figure 2. The pipe run is fixed at one end (A) and constrained at the other (B).

As the temperature increases the pipe will try to expand but will have nowhere to go as the ends are constrained by clip (B). Thus the pipe will 'snake' between supports as indicated.

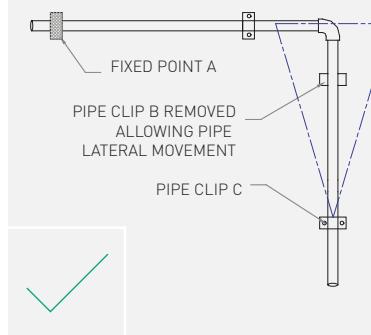

FIGURE 2

In figure 3, effective route leg planning has eliminated the need for expansion loops etc by a simple redesign of pipe supports.

By utilising a suitable pipe support to allow free lateral pipe movement, the pipe can be installed with sufficient flexibility to expand and contract. The support at (C) remains but the clip at pipe support (B) is eliminated to give sufficient length for flexibility.

FIGURE 3

SCHEDULE 80 PIPE SYSTEMS

JOINTING

SOLVENT WELDING EQUIPMENT

- Pipe Cutter or Saw
- Chamfering Tool or File
- Felt Tip Pen
- Paper Towel or Clean Cloth
- Applicator or Brush
- Tape measure
- Primer and Cement

SOLVENT WELDING PROCESS

- Make sure pipe is clean of any dust moisture or grease. Wipe with clean dry cloth.
- Shake the cement tin to ensure it is well mixed.
- Cut pipe to required length making sure that the cut is square.
- Chamfer end.
- Mark socket depth witness mark and second witness mark on pipe.
- Apply primer to pipe and socket. Vigorously work primer in to the surfaces to soften. This is critical to the solvent weld process.
- Without delay shake cement tin again. Open lid and commence application of cement to the joining surfaces of pipe and socket. You will require two coats to the pipe and a single lighter coat to the socket of the fitting.
- Quickly insert pipe (squarely) to the fitting socket.
- Check pipe insertion against witness mark.
- You should observe a uniform bead around the outside of the fitting hub. There will be a tendency for the pipe to push back – hold firmly in place to allow the cement to set (30 second to 1 minute).
- Remove excess cement.
- Leave undisturbed to set firm.
- Allow 24 hours before pressure testing.

If in doubt contact your Viadux representative.

SCHEDULE 80 PIPE SYSTEMS

INSTALLATION OF PIPE AND FITTINGS

PIPE SUPPORT

The basic principle of correct pipe support is to allow controlled axial movement of the pipe while providing lateral restraint and adequate support for the pipe.

The hanger type support does not provide lateral restraint to the pipe and therefore encourages snaking and so should be avoided except where located adjacent to the changes in direction where flexibility may be required.

Thus Pipe Supports Should:

- Be rigid in construction to adequately support pipe (fabricated mild steel angle being ideal).
- Have a wide bearing area, to allow pipe to move easily over support.
- Resist deflection, thus transferring loads to the structure.
- Be free from sharp burrs or edges to avoid cutting or damaging pipe wall.
- Allow controlled axial movement of the pipe.
- Provide lateral restraint, where required.

Pipe Clips Should:

- Allow controlled axial pipe movement
- Be free from burrs or sharp edges
- Provide required lateral restraint

- All clips shall be corrosion- resistant.
- Pipe clips, other than anchor clips shall be so constructed that, when they are securely fixed, longitudinal movement of the pipe is permitted.
- Anchor clips for fixed points shall be constructed so that when they are tightened, the fitting or pipe is securely and evenly clamped to prevent movement. The bearing width shall be 25 mm minimum.
- Metal clips shall be used in conjunction with resilient material to protect the pipe and shall have a finished clearance across the diameter to allow for radial and longitudinal movement. All materials shall be compatible with uPVC, and be smooth and free from protrusions.

Viadux stock a range of suitable pipe clips for pipe sizes up to DN 200. For sizes DN 225 and above fabricated mild steel clips with a radial clearance as per the following table are suitable.

PIPE DIAMETER	MINIMUM CLEARANCE
Up to DN150	2 mm
DN200 - DN450	5 mm
DN500 - DN750	10 mm

SCHEDULE 80 PIPE SYSTEMS

INSTALLATION

PIPE CLAMPS

It is essential that plastic pipes be adequately supported. This will avoid sagging and unnecessary stress. The table below provides guidance on clip spacing. It is important to select pipe clips that allow pipe to expand and contract. Viadux offer a range of pipe clips designed specifically for plastic pipe systems.

PIPE SUPPORT PADS

The use of pipe support pads between pipe and support is strongly recommended where there is likely to be considerable movement of the pipe or chafing of the pipe from vibration. High density polyethylene sheet 6 - 10 mm is suitable for this purpose and should be installed as indicated in figure 4.

Width of pipe supports must be sufficient to allow free axial movement of the pipe without binding.

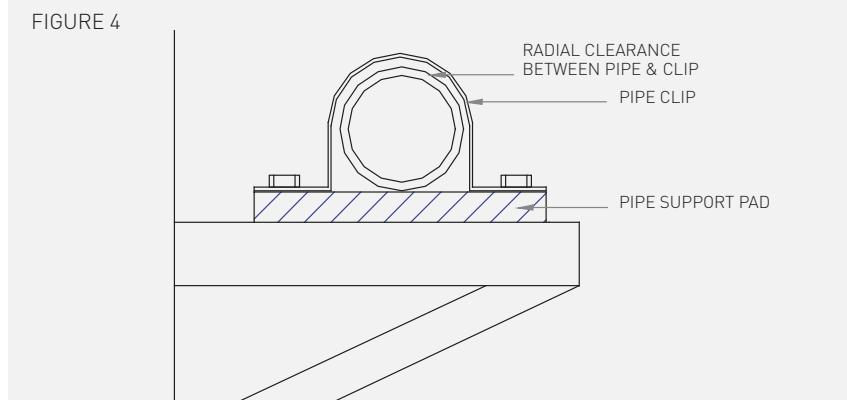

The following table gives recommended pipe support widths.

PIPE DIAMETER	MINIMUM SUPPORT WIDTH
Up to DN300	25 mm
DN350 - DN375	60 mm
DN400 - DN450	100 mm
DN500 - DN750	300 mm

SCHEDULE 80 PIPE SYSTEMS

SCH 80 PVC - U PIPE

FEATURES

Conforms to ASTM D-1785, Type 1, Grade 1.

All PVC piping is produced from NSF approved compounds conforming to ASTM D-1784.

Standard length 5.8m.

Handles temperatures up to 60°C.

Not affected by soil in buried applications.

Contains UV stabilisers TiO₂ and Carbon Black.

Economical to install and maintain.

IPS-sized (inches) 1/2-24".

Can be threaded [recommend schedule 80 or greater].

Normally grey in colour.
